

## ***ITS World Congress: Impressive Vehicle Demo Lineup for Torino***

---

The **Intelligent Vehicle Showcase** at this November's **ITS World Congress** in Turin, Italy is shaping up to be a real eye-opener, with more than 15 vehicle developers set to show off their latest.

The IV Showcase is intended to highlight Advanced Driver Assistance Systems. The **Lingotto** test track, on the roof of the Congress building, will be used for low speed demos; high speed, more complex demos will be operated at Fiat's Research Centre.

The current, preliminary list of participants is shown in the box below. Many developers will bring more than one vehicle; Fiat alone plans to bring at least ten cars/trucks/vans.
